19 JUNE

Inventory sharing across Australian Oil & Gas

Ever imagined sharing inventory across your industry? It's already happening in Western Australia, where the increase of major oil & gas operators over the past 10 years and their significant levels of stock were strong catalysts for the move to share inventory between multiple operators. Could this happen to your industry? Our keynote presenter this month shares how the problem was addressed and demonstrates the final solution and benefits such as de-risking operations and reducing inventory levels.

Richard Beck is a Chartered Electrical Engineer with significant Engineering Information Management Experience. He has held several key roles including:

- 10 years in the mining industry; responsible engineer on gold, coal and platinum mines
- 12 years with a major engineering, procurement and construction contractor in the UK, GM of Engineering and Computer Aided Engineering
- 10 years in the resource sector software industry
- Growing a start-up digital enterprise business within a major EPC
- A founding Director of DIGATEX (Digital Asset Experts) which uses a combination of domain knowledge and Artificial Intelligence techniques to large complex assets such as process, power, marine, rail, mining and large construction projects, enabling customers to maximise the value of their asset data to improve their productivity, safety and reliability.

Richard holds bachelor's and Master's Degrees in Electrical Engineering and an MBA; he is a Fellow of the Institution of Engineering Technology in London.

*Each event is "ASCI Endorsed" and is awarded half a CPD point, allocated when event attendance has been confirmed. Points can be retrieved from your ASCI Member Portal.*

**WHEN** 7.30-9.30am Wednesday 19 June 2019  
**ADDRESS** Michael Page; Level 6, Westralia Plaza, 167, Saint Georges Terrace, Perth  
**COST** Free for ASCI's Members and their guests  
\$25 for Non Members per event

Registration
